Mr. Fred Austin,

Re: Notices of Violation No. 35763

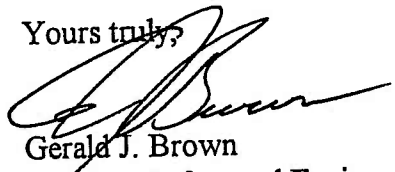

Dear Mr. Austin:

Regarding the SO₂ emission in the above NOV which exceeded the 1 hour start up limit of 200 ppmc. The emission was reported as occurring during the preheat phase of start up and should be exempt under WAC 173-400-107 (4) Excess emissions due to startup or shutdown. As explained in the CEM addendum, an emission can occasionally occur during the preheat phase of start up which is unavoidable since it is impossible to add sorbent to the system to affect control of SO₂.

The fact that the revised approval order #5730 and PSD 90-30 amendment 1 includes a higher SO₂ limit for startup conditions does not nullify the terms of WAC 173-400-107. In a July 2 meeting to resolve this issue, Mr. Nolan stated that PSAPCA's engineering group would be asked to consider a modification to the current SO₂ start up limits.

If Ash Grove can provide any information needed to assistance in the pending review, please contact me as needed.

Yours truly,

Gerald J. Brown
Manager Safety and Environment
